Bright English Medium School	S.S.C.	83.83%	May 2014 - May 2015

PROJECT

Fruit classification using image classification
This was a group project. In this project we had classified the fruit(apple) image on basis of whether the fruit is rotten or fresh, using image processing and CNN.

Personalized T&P (Training and Placement) Automation
The project will include minimum manual work and maximum optimization, abstraction and security. This is a web application which will help students as well as the administration authority to carry out each and every activity for the T&P cell. The key feature of this project is that the manual work of Data Verification is automized using image processing.

My Customised Library
This is a very begginer level project towards Android Development using java. This project have the features showing currently reading books, already read books, Books which you wanted to read(My Wishlist),etc. covering the basics of Android Development using Android Studio.

Automation : Online Website updation
Creating a Python script that will process the images and descriptions and then update company's(Fruit-company) online website to add the new products.
